

Chemical Burns: Hospital Settles.

Topical acetic acid was supposed to be diluted to 5% but was applied full-strength during the patient's gynecological procedure, resulting in chemical burns which required treatment in a burn center.

The lawsuit resulted in a settlement of \$475,000 from the ob/gyn, circulating nurse and pharmacist. **Confidential v. Confidential**, 2009 WL 6084862 (Superior Court, Massachusetts, May, 2009).
